
maximum separation — giant receding
secondary in front
φ = 0.250, Δv = -79 km s−1
to observer
near conjunction — line systems blended
secondary behind
φ = 0.530, Δv = +16 km s−1
to observer
maximum separation — giant approaching
secondary in front
φ = 0.767, Δv = +80 km s−1
to observer
separations to scale, discs ×1.5
primary
(K giant, 4930 K)
RV +56.9 km s−1
RV +10.6 km s−1
RV -20.7 km s−1
secondary
(6350 K)
RV -22.5 km s−1
RV +26.1 km s−1
RV +59.0 km s−1
